

Homemade screw chuck to hold the blank for turning.

Once the epoxy has cured, the small size screw chuck is ready to use. Remount it into your chuck. Screw on your wood blank and turn to a shape of your choosing using gouge, skew and or scrapers.

Turning the wood to shape, in this case a neat knob.

Sand the turning and apply the finish of your choice. I often use either a friction polish or lacquer depending upon the wood, my mood and the ambient temperature.

Remove the piece from the screw chuck. Clean the magnet with solvent to remove any oils from manufacturing or handling.

Apply a small amount of epoxy or super glue to the magnet recess and then press in the clean magnet. The project is complete when the glue has cured.

The finished refrigerator magnet

Note: *Larger more powerful magnets are desirable when the turning is more than 3 inches' long and is going to be used as a "hook" for aprons or potholders. Otherwise, these powerful magnets may break the glue bond with the wood before they pull off the frig.*

***This Club/Guild aims to assist members to improve their working skills. Not all such activities occur in our Guild premises, and some activities or events are promoted though this Newsletter and others directly to members in some other ways, but are still Club/Guide activities, please support them. These activities may include personal and Group tuition of members by other members (we all try to help one another for the benefit of the Club/Guild in this way) sessions in members' workshops, wood-gathering, our activities to members of the public, and other such activates and events.***

Where seniors learn  
Computing from other  
seniors;

Our courses are,  
2 hours, one day a  
week, and range from  
4-5 weeks per course.

Our Learning Centre is  
at Unit 70, Historic  
Village, 17th Avenue,  
Tauranga. That's just  
uphill in the now-  
closed Wickham  
School. We have our  
own drive-in entrance.
